

Dinosaurs

Dinosaurs are reptiles. They lived millions of years ago. Read on to find out about different types of dinosaurs.

Tyrannosaurus Rex

The T-Rex was a very tall dinosaur with short arms and strong, powerful legs. They were carnivores. Did you know they ate other dinosaurs?

Pterodactyl

They have short tails and scaly skin, long beaks and sharp, pointy teeth. They are ~~carnivores~~ carnivores, they ate fish, shellfish, crabs, dead mammals and insects. Their remains were found near the sea, specifically in marshlands.

Pterodactyl means winged-finger which explains why they have wide wings with 2 fingers at the end. They have excellent eye-sight which helps them hunt.

Triceratops

Triceratops lived 145 million years ago. They were herbivores because they ate leaves. The name triceratops means three-horned face, one on their snout and two above their eyes. Their head took up 80% of their body. They lived in North America, in countries such as the Bahamas and Cuba.
