

Some types of animals come out at night. They are called nocturnal animals. They come out at night because their food comes out at night.

Hedgehogs

Hedgehogs are nocturnal animals because they come out at night. They look for food like slugs.

They only drink water because they are allergic to milk.

Foxes

Foxes are another type of nocturnal animal. They hunt alone and are wild. Foxes eat anything including berries.

Bats

Bats are the only flying mammal.

They live in caves, trees and old buildings. Bats eat fruit insects and small animals. Did you know they sleep upside down?
