

Mammals

All mammals are covered in fur or hair. They are all warm blooded. Zebras, lions and tigers are all mammals.

Mammals give birth to live young mammals give their own milk to their young.

Fish

Fish have things so that they can breathe with gills. Fish are warm blooded and have fins to help them swim. So they lay their eggs. Shark and gold fish are all fish.

Insects

Insects live in colonies to help each other. So we know they are insects they 2 antennae. Bugs, ants and butterflies are types of insects.

Birds

Birds are warm blooded. Most birds can fly, but penguins can not fly. To have children, they lay eggs, birds have feathers and a beak. Ostrich, flamingos and eagles, they're all birds.
