

Henry VIII. The second son of Henry VII was and is known for 4 things: his passion for religion, his cruelty, the gear he spread across the country and of course his 6 wives, which he had for over 38 years of reign. Why did he have 6 wives? Each wife had one expectation: give birth to a son; because of this, he lost his true love, and had to get married six times.

Anne Boleyn was the second wife of King Henry VIII, and gave birth to six children. Unfortunately, because they had a lack of medical care, all five of their children died, all except for one who survived. This baby was a girl and soon grew up to be the future, famous Queen of England, Queen Elizabeth I. Whilst being a lady in waiting to Catherine of Aragon - Henry's first wife - , Henry grew impatient and because Anne had made him restless, he used the Bible to introduce divorce into the Church.

For 3 years, Jane was Anne's lady in waiting. Whilst still married to his second wife (Anne), Henry fell deep in love with Jane (for the first and last time). Soon after getting married, Jane provided Henry with something none of his other wives could: a son. Exactly twelve days later, Jane died due to childbirth complications. This angered Henry and made him more merciless.
